

FAQ FOR AMD

Smart Automatic Pill Dispenser for Elderly Care

Our Smart Automatic Pill Dispenser is a cutting-edge device designed to help elderly individuals manage their medication with ease and accuracy. With multiple compartments for different medicines, this device can store and organize pills according to prescription schedules. The dispenser automatically adjusts to the required dosage and dispensing times, ensuring that your loved ones never miss a dose.

The pill dispenser includes a built-in alert system that notifies caregivers and family members if a dose is missed. You'll receive real-time updates via a mobile app or SMS, even if you're abroad. The device is also equipped with a customer support service to assist with any issues or questions.

Key Features:

1. **Multiple Compartments**: Store different types of pills in separate sections.
2. **Customizable Schedules**: Adjust dosage times for daily or weekly medication routines.
3. **Real-Time Alerts**: Get notified if the medicine is not taken on time.
4. **Liquid Medicine Support**: Safely store and dispense liquid medications as needed.
5. **Caregiver Notifications**: Keep caregivers and family informed, even when they're far away.
6. **User-Friendly Design**: Easy-to-use interface with a companion mobile app.

Ensure the well-being of your loved ones with our reliable, easy-to-use Smart Automatic Pill Dispenser.

FAQ *

Can the device be integrated with wearable health devices to provide real-time medication reminders based on physiological data (e.g., blood pressure or glucose levels)?

REMARK *

Wearable health devices (e.g., fitness trackers, smartwatches) can track physiological metrics like blood pressure, glucose levels, heart rate, or oxygen saturation. When these devices detect values outside the predefined thresholds (e.g., high blood pressure or glucose levels), they can trigger medication reminders.
